

MOHAMMAD (HOOMAN) YARAHMADI

Senior Java Backend Engineer

+98 922 755 2802 | hoomanyarahmadi72@gmail.com | linkedin.com/in/hooman-yarahmadi | github.com/HoomanDevp

PROFESSIONAL SUMMARY

Senior Java Backend Engineer with 8+ years of experience designing, modernizing, and operating mission-critical systems across digital banking, core banking, fintech, and insurance. Specialized in secure identity and onboarding, API gateway architecture, payment processing, distributed systems, and legacy modernization. Hands-on expertise with Java 21, Spring Boot, Spring Security, Spring Cloud Gateway, Spring Authorization Server, OAuth2, Kubernetes, and integrations with core-banking and third-party KYC services.

TECHNICAL SKILLS

Backend	Java 8/11/17/21, Spring Boot, Spring Framework, Spring Cloud Gateway, Spring Security, Spring Authorization Server, Spring Data, Spring Batch, Hibernate/JPA, REST APIs
Architecture	Microservices, Distributed Systems, Clean Architecture, DDD, API Gateway, Idempotency, Retry, Circuit Breaker, Rate Limiting
Identity & Security	OAuth2, JWT, Keycloak, User Activation, Cryptographic Key Exchange, KYC Integrations, 3DES
Data & Messaging	Oracle 11g/19c, PostgreSQL, DB2, MySQL, MongoDB, Redis, IBM MQ; Kafka (personal projects)
DevOps & Observability	Docker, Kubernetes, GitLab CI, Argo CD, Linux, Maven, Splunk, OpenTelemetry, Prometheus, Micrometer
Testing & Tools	JUnit, Mockito, Git, IntelliJ IDEA, Apache Tomcat

PROFESSIONAL EXPERIENCE

Java Software Developer | Bajet - Tejarat Bank Digital Banking Jan 2025 - Present

- Design and develop Java 21/Spring Boot services for a digital banking platform serving approximately 5 million users and supporting high-volume financial transactions.
- Architected and delivered three dedicated API gateways for mobile/web channels, the administrative panel, and B2B service consumers using Spring Cloud Gateway, replacing legacy .NET/Ocelot gateways.
- Implemented audience-specific routing, authentication integration, centralized gateway policies, and rate limiting to protect downstream services and standardize cross-cutting behavior.
- Built user registration and login flows with Spring Authorization Server, Spring Security, OAuth2, and JWT-based access control.
- Designed the activation and cryptographic key-exchange workflow required for users before secure authentication, including validation, state management, and error handling.
- Integrated third-party KYC services into user onboarding to coordinate identity verification and registration outcomes.
- Implemented fund-transfer flows including Paya, SATNA, POL, internal transfers, and card-to-card, with idempotency, retries, explicit error handling, and multi-step confirmation.
- Delivered card issuance, activation, and dynamic CVV/OTP capabilities; integrated Core Banking APIs and applied 3DES encryption to sensitive operations.
- Modernized legacy C#/.NET subsystems and a BNPL platform using Java 21, Spring Boot, Clean Architecture, MongoDB, and partner integrations for LendTech providers including Azki and Tara.
- Deployed and operated services on Kubernetes with GitLab CI and Argo CD; implemented Redis caching and Splunk/OpenTelemetry-based observability.

Java Software Developer | Novin Kish ISC Aug 2022 - Jan 2025

- Spearheaded development of the Central Bank Instant Payment (POL) system, coordinating transaction flows between switch and core-banking systems in the Shetab ecosystem.
- Developed Ghasedak middleware for integration with the national SATNA settlement network using Java, Spring, and REST APIs.
- Designed and developed the Central Bank Bill Payment System, processing batch settlement among Shaparak, more than 12 PSPs, and 32 banks.
- Improved reliability and performance of financial integrations through production troubleshooting, operational support, and targeted optimization.

Bank System Specialist | Dadeh Pardazi Iran Co.**Jul 2019 - Aug 2022**

- Designed and executed Spring Batch migration programs for more than 3 million cheque accounts across five controlled phases in Tejarat Bank core banking.
- Developed and maintained the Tejarat Bank Branch Manager server, supporting more than 3,500 clients through Java TCP/IP socket communication.
- Developed the Legal Affairs Management platform using Java, JAX-RS, Jersey, JAXB, PrimeFaces, and DB2.
- Resolved production issues and optimized high-volume migration and legacy core-banking components.

Java Developer | Avihang Co.**Oct 2016 - Jun 2019**

- Developed and maintained insurance self-care and partner-management applications using Java, Vert.x, GWT, and Oracle.
- Built RESTful services and responsive single-page interfaces while resolving defects, improving performance, and adapting to evolving business requirements.

SELECTED PERSONAL PROJECT

Reservation System | GitHub: HoomanDevp/reservation**Java 21**

- Built an enterprise-style appointment reservation service using Spring Boot, PostgreSQL, Redis, JWT, Docker, and Maven.
- Implemented Redis-backed asynchronous queues, idempotent processing, optimistic locking, retry with backoff, dead-letter queues, rate limiting, caching, and TTL-based cleanup.
- Added Micrometer/Prometheus metrics, health indicators, tracing, validation, audit logging, and API documentation.

EDUCATION

Bachelor of Software Engineering | Azad University**2013 - 2017**
